— ABOUT ME

My professional journey began in Graphic Design, but a natural curiosity and the need to adapt led me hands-on into IT Support, where I learned to manage computer equipment and servers. While I do not consider myself an expert in everything, this path has shaped me into a highly adaptable individual with a deep passion for continuous learning. Currently, I am deeply fascinated by Web Development, System Automation, and the world of Artificial Intelligence (particularly LLMs and CNNs). My ultimate goal is to deeply understand, communicate with, and eventually build AI models myself, allowing me to create meaningful projects and stay adaptable for the future. I am highly motivated, always ready to learn, and eager to bring my diverse background into a supportive environment where I can grow and contribute steadily.

— PERSONAL PROJECTS

(Web Development & Automation)

MINI-ERP System (Smart ERP)

- Web-based comprehensive ERP system for SMEs, integrating Purchasing, Inventory, Sales, Finance, and Document Approvals into a single platform.
- **Core Features:** PR → PO → GRN with real-time stock updates, Quotation → SO → DO with delivery links, and Master data management.
- **Tech Stack:** Python, Django 6, DRF, JWT, PostgreSQL, Vue 3, Vite, JavaScript, Tailwind CSS.

SabaiBill (SME Document Management System)

- Developed an all-in-one document management web application for SMEs to seamlessly generate Quotations, Sales Orders, Delivery Orders, and Invoices.
- Features customizable company settings, templates, automated VAT/Discount/WHT calculation, and 1-click document progression with PDF export capabilities.

- Built with robust bilingual support (Thai/English) switchable within the app, supporting dual-language document data entry.
- **Tech Stack:** JavaScript (React, Node.js) and database definition with Prisma Schema.

CJP Frozen Food (cjpfrozenfood.co.th)

- Developed a product catalog and request system allowing customers to browse and request quotations or open Purchase Orders (PO).
- Integrated LINE Notify API to set up real-time automated alerts for the admin team whenever a customer submits a new request via the website.

Yuki Pepper Art Store (yukipepper.com)

- Built an e-commerce platform for selling artwork with an automated order notification system via LINE.

Workflow Automation — Parcel tracking (Make.com)

- Designed a Make.com scenario for logistics: LINE watches incoming messages, downloads photo attachments, sends images to an OCR service via HTTP, extracts tracking numbers with the Text parser (pattern matching), logs rows in Google Sheets, and pushes predefined shipping-status messages back to customers on LINE (real-time, “immediately as data arrives”).
- Reduced admin workload from manual keying to a short **Snap** → **Wait** → **Copy** → **Send** routine while the automation handles recognition, logging, and notifications.
- **Stack:** Make.com, LINE Messaging API (watch / download / push), Google Sheets, HTTP + OCR API, Make Text parser.

— WORK EXPERIENCE

Freelance Web Developer, Digital Marketer & Designer

Mar 2025 - Present

FREELANCE

- Design and develop websites with a strong focus on workflow automation to streamline business operations and reduce manual tasks for clients.
- Provide professional graphic design services, specializing in packaging design and creating engaging digital marketing assets.
